

L-Band 1.5 Kw CW isolator

VHF Band 2 Kw Circulator

M Wave Design Corporation is proud to announce our line of high power coaxial protection products. Our “HPC and HPI” Circulators and Isolators offer industry benchmark performance at competitive prices.

This family of circulators and isolators covers the 100 MHz to 18 GHz range in varying power ratings. The designs may be tailored to high peak power with short duty cycles, high average (CW) power, or a combination of both. They are generally conduction cooled, but can be configured for forced air and liquid cooling. This design series has been tested up to 90 Kw peak and 8Kw average RF power and are available with a variety of connector interfaces.

Contact the factory for specifics on your requirement.
